

Step 1

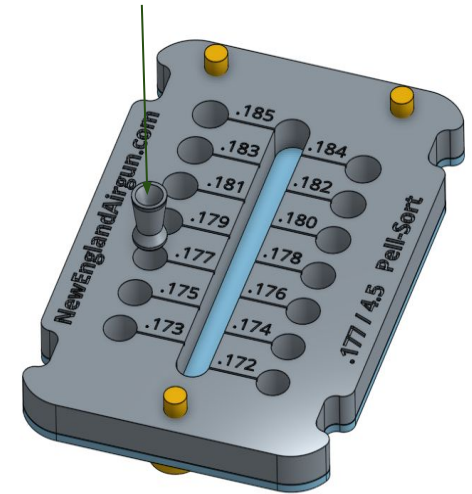

Insert pellet in speed slot.

Step 2

Slide pellet down till it stops.

Note approx size and sort for large medium small diameter.

Optional Step 3

Roundness and exact size can be found by placing the sorted pellet into the precision holes.

Note: lines and sizes are for the holes only, slot position is for approx size not exact size.

Significant improvements of the Pell-Sort

- Speed Slot for quick sorting vs placing in holes.
- Sorts both head and skirt sizes.
- Pocket sized and durable 1/8" ss.

Current design is for .177 pellets other sizes will include .22 and .25 but can be made to accommodate any diameter.

Why use the Pell-Sort?

Sorting improves accuracy by giving the ability to match the pellet (ammo) with the barrel of the airgun being used.

Certain diameter sizes will shoot well and others miss their mark (Fliers)
